

Lights from cups and bottles (and fairy lights)

We can make light features out school milk bottles and fairy lights.

We can also make sparkle ball and domelights from see through plastic water cups. These can be easily fixed together using staples and take on an igloo type form. Fairy lights are placed underneath the dome or if possible, a light is inserted into each cup to create a spectacular effect.

Aims and objectives for schools projects

Overall I aim to see that:

- Participants enjoy the project, have fun and learn new skills.
- Participants have a chance to meet new people, to share skills, to share memories, to achieve something they never thought possible.
- People see their work displayed publically.
